Geopogo

Recommendation for William Jarvis-Cross   September 26, 2021

I highly recommend William Jarvis-Cross as an addition to your team. William worked remotely as an engineering trainee at Geopogo during Spring and Summer of this year. Despite the academic pressures facing a full-time student at the University of Toronto, William worked diligently and effectively with our team on engineering projects.

William is a self-starter, ready to take on tasks and execute them successfully. He asks the right questions along the way and communicates well with the team as he progresses with each task. Since our company is a tech startup, William's flexibility, organization, and resourcefulness were very valuable. His strong technical skills made a significant difference in the development of our 3D city models, built on OSM data.

A big part of William's success as a team member comes from his insightful assessment of problems and how to solve them. He applied his strong analytical and feedback skills to one of his roles at Geopogo, including adding undo and redo functionality to our desktop 3D design tool. William would be a valuable addition to any team.

Please let me know if you have any questions. I would be happy to talk with you.

Sincerely,

Dave Alpert, MBA, FAIA, LEED AP
CEO and Co-Founder
